NPWT WOUND FILLER
In general wound management there is a wide range of wound dressings to choose from to get the best result. In Negative Pressure Wound Therapy (NPWT), the options for wound filler are very limited. Therefore it is time to introduce a new one - Sorbact® Negative Pressure Wound Filler. We did not feel the need to invent something new, we simply listened to our customers and adapted Sorbact® for NPWT application.
PRODUCT

DESCRIPTION

Sorbact® NPWT Wound Filler is a hydrophobic cellulose acetate fabric that conforms to the wound bed providing negative pressure distribution without in-growth of granulation tissue. Sorbact® NPWT Wound Filler binds pathogenic microorganisms, creates a wound healing environment that promotes the wound healing process by removing exudate and infectious material, affecting blood flow in the wound bed, stimulating wound contraction and microdeformation, accelerating granulation tissue formation and thereby preparing the wound bed for closure.

INSTRUCTIONS FOR USE

1. Treat the wound according to local clinical practice.
2. Clean and dry periwound skin.
3. Remove the Sorbact® NPWT Wound Filler from the pack using an aseptic technique.
4. Unfold and moisten Sorbact® NPWT Wound Filler with sterile saline.
5. Loosely fill the wound cavity. Make sure that the wound filler is in direct contact with the wound surface. Do not pack densely. Apply Sorbact® NPWT Wound Filler in its complete form, cut excess material as required. Application of multiple cut pieces increases the risk of retention of the product in the wound and is not recommended.
6. Proceed as directed for the NPWT system used.

SORBACT BENEFITS

- Binds bacteria and fungi.¹
- Great wound fluid removal.²,³
- Fast granulation formation.²,³
- Effective pressure distribution.²,³
- Limited tissue ingrowth for easy and painless removal.³,⁴
- Easy to fill and adapt to the wound cavity.²
